

Keep Your Cool and Wallet Happy: Smart AC Strategies for Summers

Air conditioning can make up a significant portion, between 30 to 50 percent, of a household or company's yearly energy expenses. By following straightforward and easy-to-implement tips, you can considerably lower your electricity bill.

- Set your AC thermostat at 24°C for comfortable and cost-effective cooling.
- Keep air-conditioned room doors closed as much as possible to retain cool air.
- Clean your AC filter every month for efficient functioning.
- Use ceiling fans alongside the AC to circulate air and reduce the AC's workload.
- Line windows and walls with plants and curtains to block sunlight and insulate the room from heat.
- Turn off the AC when leaving the room or house for extended periods to reduce energy consumption
- Cool roofs, like painting them white or installing white tiles, can significantly reduce air conditioning costs.
- Check electric appliances' energy rating before buying them; higher ratings result in higher savings.

Replace your electricity guzzling AC with a new energy-efficient 5-star AC @ upto 63% discount

- ✔ Attractive buy-back schemes from leading brands like Voltas, Godrej, LG, Blue Star and Lloyd
- ✔ Window/Split ACs available under the scheme

SAFETY FIRST Get an ELCB installed

It is mandatory for consumers having electricity load of 2 kW & above* ELCB (Earth Leakage Circuit Breaker) is a simple yet a very useful device that detects earth leakage, automatically tripping and disconnecting the electricity supply to the premises/equipment, thus preventing serious mishaps

*Under section 42 of the Central Electricity Authority (CEA) Regulation 2015
